

Fast Diagnosis of Dermatomycosis

- ▣ Detection of the main dermatophytes and the most common fungi and moulds in one reaction
- ▣ Identification of the most common dermatophyte species
- ▣ Rapid results eliminating weeks of culturing
- ▣ Differential diagnosis of nondermatophyte infections, mixed infections and other non-infectious dermatosis
- ▣ Ready-to-use reagents
- ▣ Automated process and results calling
- ▣ Barcode traceability and LIMS compatibility
- ▣ Minimum hands-on time

Tandem-Plex™ Dermatophytes and Other Fungi

Simultaneous detection of 7 dermatophyte targets and 6 other fungal targets from a single sample.

12 well	REF 24115	CE IVD
------------	--------------	-----------

PANEL TARGETS	
Dermatophytes	Yeasts / moulds
Trichophyton spp.	Candida albicans
Trichophyton rubrum complex	Candida glabrata
Trichophyton mentagrophytes complex (T. interdigitale)	Meyerozyma guilliermondi (Candida guilliermondi)
Microsporum spp.	Candida parapsilosis
Microsporum canis	Scopulariopsis spp.
Epidermophyton floccosum	Aspergillus spp.
Nannizzia gypsea	

CONTROLS
Artificial sequence for internal control of amplification
Extraction control*
Synthetic positive control*

* optional
